

High Safety TMR Protection Systems for Rotating Equipment with SIL3 requirements Series E16x356

E16A356 System Front View

E16 – The most secure TMR Protection System worldwide

The BRAUN High Safety Protection System Series E16x356 is TÜV certified for SIL3 acc. IEC 61508:2010 and is API 670 Ed.5 and API 612 Ed.7 compliant. It provides protection against overspeed and detects reverse direction. Also up to six other trip criteria such as emergency stop, boiler protection, etc. can be included in the trip string.

Due to its globally unique and true 2oo3 architecture, the system will tolerate one faulty signal within each trip criterion without trip being released.

The TMR (Triple Modular Redundancy) design ensures highest safety and availability for the monitored machine, i.e. the system will bring the machine into a safe state once it has reached a critical condition.

The E16 Protection System consists of three Monitors E1668 for the evaluation of speed and external trip signals, one Test Generator E1698 and a system backplane; all mounted into a 19" rack.

The E16 Protection System permanently monitors the speed sensors for their correct function. During its complete useful lifetime of 20 years, the system does not require any external proof tests. It is completely maintenance-free and therefore has minimized TCO (Total Cost of Ownership).

All active components (including the trip relays) are directly located on the Monitors and thus can be replaced during operation. The protection system offers in total six 2oo3 Trip Outputs, thereof three for a solenoid trip block and three for other purposes.

KEY FEATURES

- SIL3 / IEC 61508:2010 certified
- API 670 Ed.5 compliant
- API 612 Ed.7 compliant
- Total Response Time to Trip < 15 ms
- Useful Lifetime and Proof Test Interval = 20 years
- Triple speed measurement and monitoring by each Monitor
- Variable Overspeed setpoint depending on acceleration
- Direction detection
- Evaluation of external Trip Criteria signals by up to 6 voters per Monitor
- All Trip Outputs formed with safety relay contacts in 2oo3 technique
- Trip Output Monitoring to solenoid with Trip-Lock
- Up to 5 additional speed setpoints in 2oo3 technique
- Sensor signal repeater outputs, free floating, and push/pull
- Automatic test and monitoring of 2oo3 solenoid trip block
- The only protection system worldwide where all relays or other active components are located on the Monitors

BENEFITS

- Maintenance-free during Lifetime, therefore minimized TCO
- Highest safety at maximum availability due to true 2oo3 architecture for each trip criterion within each Monitor
- Extremely low PFD value (Probability of Failure on Demand), less than 1 % of allowable value for a SIL3 loop
- Replacement of all active components during operation possible (hot swap and highest availability)

Specifications of E16x356

Conformity to Standards	Directives 2014/30/EU (EMC Directive) 2014/35/EU (Low Voltage Directive) 2011/65/EU (RoHS Directive) SIL3 acc. IEC 61508:2010, API 670 Ed.5, API 612 Ed.7, EN ISO 13849-1:2008, EN 55011 Class A	Standards EN 61326-1, EN 61326-3-2 EN 61010-1 EN 50581
Power Supply	3x 24 Vdc / 0.5 A, total power consumption < 20 watts (2x 85...265 Vuc on request)	
Speed Signal Inputs	Versions for: BRAUN A5S... Sensors Eddy Current Sensors (EC) Magnetic Pick-Up Sensors (MPU)	
Control Signal Inputs	High Level: +24 Vdc (+18...+48 Vdc) Low Level: 0 Vdc (-20...+3 Vdc) Reference: negative pole of power supply	
Response Time to Trip	Total response time from signal input to Trip Outputs in case of Overspeed Trip or external Trip Criteria: < 15 milliseconds	
Accuracy	+/- 0,1 RPM	
Trip Outputs	All Trip Outputs are 2oo3 voted circuits (2-out-of-3) 2oo3 voting is done by wiring of safety relay contacts (located on Monitors) on system backplane 3 load circuits for solenoid trip block, 3 signal circuits to DCS, PLC or coupling relays Maximum load capacity of load outputs: 3 A / 24 V for DC13 loads Maximum load capacity of signal outputs: 0.1 A / 50 Vdc For inductive type loads spark extinguishing means must be provided	
Alarm Outputs	Maximum load capacity: 0.1 A / 50 Vdc	
Display	Monitors: 5 digits with red LED figures	
Data Interface	Dual port PROFIBUS DP, up to 12 Mbit/s RS232 for Parameter Configuration	
Protection Grade	IP 20 for E16A and E16E, IP 65 / NEMA 4 for E16G	
Connectors	Pluggable spring cage connector, Phoenix Combicon FK-MLP1,5/...ST-3,5 (Screw terminal connectors on request)	
Operating Conditions	Ambient temperature: 0...60 °C (32...140 °F) Relative humidity max. 95%, non-condensing	
Safety Data (IEC61508)	PFDavg = $8,41 \cdot 10^{-6}$ at T1 (Proof Check Interval) = 20 years, System Type B; HFT = 1; Architecture 2oo3, Service Time 20 years	
Weight	3,0 kg (E16A), 3,7 kg (E16E), 13,0 kg (E16G)	
Dimensions (W x H x D)	220 x 195 x 222 mm (E16A), 483 x 133 x 218 mm (E16E), 410 x 510 x 270 mm (E16G)	
Optional Accessories	IS-RS232-E16: CD-ROM with Interface Software for OEM, IS-RS232-E16-L2: CD-ROM with Interface Software for Enduser, L3D05: Connection cable between E16 and PC with RS232	

Features of E16 Series

Ordering Key for Systems E16x356.abc

E16x356.abc

Mechanical Design

x = A : Bulkhead Mount Version
x = E : 19" Rack Mount Version 3HE/84TE
x = G : NEMA 4 Version with front window (Bulkhead Mount)

Analog Output

a = 0 : without Analog Output
a = 1 : 1 Analog Output in each Monitor
a = 2 : 1 Analog Output certified SIL3 in each Monitor

Voter

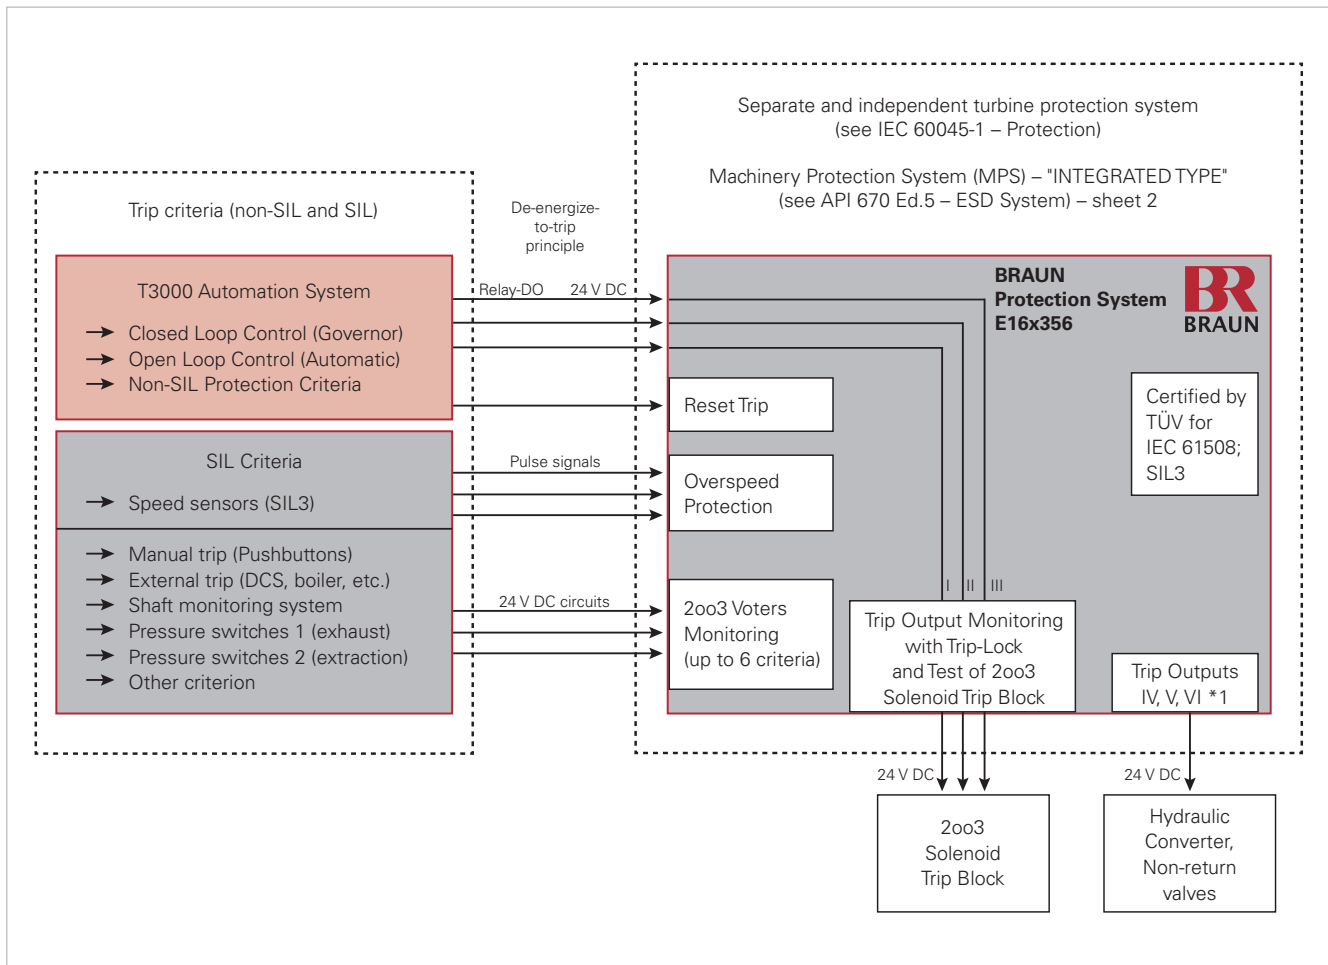

b = 1 : 1 Voter (for 3 signals) in each Monitor for external trip criterion
b = 2 : 6 Voters (for 18 signals) in each Monitor for external trip criteria

Speed Signal Inputs

c = 1 : Speed Signal Inputs and power supply for BRAUN A5S... Sensors
c = 2 : Speed Signal Inputs and power supply for Eddy Current Sensors (EC)
c = 3 : Speed Signal Inputs for Magnetic Pick-up Sensors (MPU)

- Examples:
- E16A356.021 : Bulkhead Mount Version, without Analog Output, with 6 Voters, Speed Signal Inputs for BRAUN A5S... Sensors, 2 PROFIBUS Interfaces per Monitor
 - E16A356.112 : Bulkhead Mount Version, with Analog Output, with 1 Voter, Speed Signal Inputs for Eddy Current Sensors (EC), 2 PROFIBUS Interfaces per Monitor
 - E16A356.013 : Bulkhead Mount Version, without Analog Output, with 1 Voter, Speed Signal Inputs for Magnetic Pick-up Sensors (MPU), 2 PROFIBUS Interfaces per Monitor
 - E16E356.121 : Rack Mount Version, with Analog Output, with 6 Voters, Speed Signal Inputs for BRAUN A5S... Sensors, 2 PROFIBUS Interfaces per Monitor
 - E16E356.211 : Rack Mount Version, with Analog Output certified SIL3, with 1 Voter, Speed Signal Inputs for BRAUN A5S... Sensors, 2 PROFIBUS Interfaces per Monitor

Application Example (by SIEMENS Germany)

BRAUN – Speed Monitoring and Protection Systems for Rotating Equipment

BRAUN Industrial Electronics develops, produces and sells an array of "Rotating Equipment" protection systems for use in industrial applications worldwide with the focus on overspeed protection. These systems comply with the highest standards of safety and availability.

As a globally leading technology provider with over 50 years of experience, BRAUN has been continually meeting and mastering the challenges associated with protecting the facilities of companies within the power generation, oil, gas, and chemical industries. Our protection systems are installed in more than 100 countries around the world and are mainly used in safety-critical applications with rotating parts.

For our OEM customers, BRAUN is both a solution oriented systems provider and a reliable partner.

Our solutions comprise a variety of products for the detection and monitoring of speed and related parameters.

Always matching the requirement. Always the perfect solution for safety and availability.
